The results presented in this table were obtained from samples of candies collected from the wholesale and retail level. In each case where detected lead levels are reported, the source of lead contamination is uncertain. The amount of lead in a particular brand or type of candy may vary greatly from sample to sample based on the manufacturing techniques or ingredients used, and/or the handling of candy after its manufacture, including handling by the consumer. Data presented in this table is for informational purposes only, does not include all candies, and represents lead levels only in the candy samples tested.

(1) Laboratory: FD - Food and Drug Laboratory

(2) Date of sample analysis completion.

(3) The current state and federal regulatory limit for lead in candy is 0.1 parts per million (ppm). ND denotes that the test result was below the level of detection for the method used and that this ND level was less than 0.05 ppm.
